

Advance Vision Group

CCTV Security System

The Marlborough School

The Requirements

Marlborough Church of England School in Woodstock has over 1000 pupils between the ages of 11-18 on an expansive campus with 7 large buildings. The School also enjoys a Specialist Status in Business Enterprise and Humanities. Maintaining security of such a large complex at all times can only be achieved with the aid of a centrally managed CCTV surveillance network combined with a monitored Intruder Alarm system. Marlborough School selected Advance Vision Group to help advise them and put these systems in place and continue to provide a regular maintenance service thereafter.

The Solution

The Web enabled CCTV surveillance system recommended and installed by Advance vision comprised 2 fully functional Dome Cameras with pan and tilt controlled by a joystick on a PC. There were also 9 fixed internal and external cameras all linked to Hard Disk Recorder with over 30 days of high resolution storage capacity. The system can easily be accessed by authorised staff from any PC connected to the Internet.

Advance Vision also provides the Monitored Intruder Alarm System which covers all buildings entrances and exits and any alarm gets routed directly to trained operators who can immediately inform the Police and key holders if necessary. With a linked CCTV system with its 30 day high resolution history safely stored on Hard Disk it is possible to link any alarm trigger point to one of the nearest cameras to closely record what is happening. This can be a major deterrent in itself as it can help identify the perpetrators.

Customer Comments

"Keeping a watchful eye on such a large area would not be possible without the use of the Advance Visions CCTV Surveillance System". John Tomalin, Buildings and Site Manager at Marlborough School and adds, "The Advance Vision CCTV system is so flexible that senior teaching staff can also have access to the cameras from any of their Personal Computers and home-in on potential trouble spots or situations and take the appropriate action. We have had several occasions where use of the CCTV system has helped solve issues and others where attempts from trespassers to cause damage to buildings have been prevented. Coupled with our Monitored Intruder Alarm system the benefits of having both systems installed and maintained by the same trusted and local supplier are significant.

We have enjoyed working with Advance Vision Group as they have been really great and are providing exceptional service. They have proved very responsive and helpful when ever we have needed them onsite and their systems are simple to use and work brilliantly.

It is very important knowing that we can rely on Advance Vision's technical knowledge and prompt support and we would be very happy to recommend Advance Vision to other schools and colleges"

John Tomalin, Buildings and Site Manager, The Marlborough Church of England School.
